

AI Engineer Task – Voice AI Interaction (Web App)

Objective:

Create a voice-based AI assistant that accepts spoken input, processes it via LLM (e.g., OpenAI/Gemini), and speaks back the response.

Scope of Work:

- Voice input using mic (browser-compatible)
- Speech-to-text via Whisper (or browser API)
- Text input to OpenAI/Gemini or other LLM
- Text-to-speech response using TTS API (e.g., ElevenLabs or free one)
- Display transcript and playback audio

Tech Recommendations:

- Frontend: React/Next.js
- Whisper (OpenAI or local model)
- TTS: ElevenLabs or Web Speech API
- LLM API: OpenAI, Gemini, etc.

Deliverables:

- GitHub repo with instructions
- Optional video demo or hosted link

 **Recommended Timeline:** 4 to 5 days

Bonus Ideas:

- Conversation memory (last 3 messages)
- Responsive mobile view
- Voice control UX optimizations
